

DAY 06 – DATA QUALITY MANUAL REVIEW

Nifty100 Financial Intelligence — Sprint 1

Objective: Review five randomly selected companies, verify financial year coverage, investigate companies with fewer than five years of data, and determine whether missing data is caused by the ETL loader or by source-data availability.

1. Five Random Companies Reviewed

Company	Profit & Loss	Balance Sheet	Cash Flow	Financial Ratios	Market Cap
SUNPHARMA	13 years	13 years	12 years	12 years	6 years
TITAN	13 years	13 years	12 years	12 years	6 years
CIPLA	13 years	13 years	12 years	12 years	6 years
TECHM	13 years	13 years	12 years	12 years	6 years
LODHA	13 years	13 years	9 years	9 years	6 years

2. Companies With Data Gaps

Company	P&L	Balance Sheet	Cash Flow	Financial Ratios	Market Cap	Finding
ATGL	8	8	0	0	6	Source data missing for Cash Flow and Financial Ratios
JIOFIN	3	3	2	2	6	Limited historical financial data in source files
SBIN	13	0	12	0	6	Source data missing for Balance Sheet and Financial Ratios

3. Detailed Investigation

ATGL: The database showed 8 years for Profit & Loss and Balance Sheet, but 0 years for Cash Flow and Financial Ratios. Source Excel checks confirmed ATGL has 8 Balance Sheet records but no Cash Flow records. Financial Ratios also contained no ATGL records. This indicates source-data unavailability.

JIOFIN: JIOFIN has 3 years of Profit & Loss and Balance Sheet data, 2 years of Cash Flow, 2 years of Financial Ratios, and 6 years of Market Cap. The available records were inspected and the limited history is consistent with the source data.

SBIN: SBIN has 13 years of Profit & Loss and 12 years of Cash Flow, but 0 years of Balance Sheet and Financial Ratios. Source Excel checks confirmed no SBIN Balance Sheet records. Financial Ratios also contained no SBIN records. This indicates source-data unavailability.

4. Loader Bug Investigation

The missing records were compared against the source Excel files. The investigation did not identify a loader bug. The Day 05 database load successfully inserted the records that were present in the source files. The Day 05 foreign-key check also passed with 0 violations.

5. Final Day 06 Conclusion

Manual review of five randomly selected companies was completed. Year coverage was checked across the major financial tables. ATGL, JIOFIN, and SBIN were investigated because of incomplete coverage. The evidence supports source-data availability limitations rather than an ETL loader defect. Day 06 manual data-quality review is therefore complete.
